Lancaster Farming

Vol. III. No. 50. Quarryville (Lancaster County) Pa., Friday, Oct. 24, 1958 $2 Per Year

1960 Beef Drop Seen

Meat Bd. Eyes Pork Cycle Low

Average prices received by farmers and cash receipts from sales of meat animals are higher this year than in any year since 1954. Next year, the USDA Livestock and Meat Outlook and Situation board predicts, prices of cattle will continue fairly high — but prices of hogs will be lower.

Cattle numbers next January 1 will be near the high mark reached in 1956. In 1960 and later years, numbers probably will set successive new highs

Since the inventory expansion still is in the initial stage, marketing in 1959 are not likely to increase much. But if the build up in numbers is rapid, expansion in marketings later would be large and prices could fall sharply

Production of hogs started upward this fall and will continue upward in 1959. Last June, hog producers expected to increase their 1958 fall farrowings 13 per cent

A report from nine states in September indicated they were fulfilling their plans and even exceeding them slightly Hogs from the fall crop will arrive at markets beginning early in 1959 Prices of hogs this fall are expected to decline at only about the normal seasonal rate — they may average about the same as last fall.

But prices during the winter will show little or no seasonal recovery, and prices thereafter will be appreciably lower than in corresponding periods of 1958.

In September producers in nine states planned a 20 per cent gain in December - February farrowings. This may overstate the prospective increase in the spring total, as a further shift to early farrowing dates may be occurring. But a substantial rise in the total 1959 spring pig crop seems probable

Prices of hogs in the fall of 1959 are almost certain to drop to their lest point since the fall of 1955 How nearly they approach that low depends on how much the total spring crop is increased.

If the total crop should be up close to the 20 per cent in view for the rst three months, prices next fall would be in grave danger of falling to the $10 50 they reached the fall of '55. If the expansion should be moderate, prices would probably remain above that low by an appreciable margin.

On July 1 there were 16 per cent more cattle on feed than a year earlier Since then marketings have been above last year and new placements below This is working off the back-log of long-feds, and fed cattle prices may advance near the end of this year.

Recent prices of feeder cattle have much closer to current prices of fed cattle than was the case a year ago Since the total supply of young cattle is a little greater than last year, prices of feeder cattle are not expected to rise continuously this fall and winter as they did last year On the other hand, any seasonal weakness will be small.

Prices of lamb have averaged about the same as a year ago. They may continue to do so. Inventories of sheep and lambs are still being built up, and demand for replacement lambs is strong.

THE LATEST USDA livestock outlook report indicates cattle of this type will continue to draw "fairly high" prices, but after 1959 "prices could fall sharply."

State to Inspect Christmas Trees Consigned to N.Y.

HARRISBURG — State Agriculture Department inspectors this week began certification of Christmas trees consigned to New York State buyers.

Dr Thomas L. Guyton, director of the Bureau of Plant Industry, said today that new Empire State regulations require pest-free certification of all trees from any source, including Canada The regulation became effective October 15.

Tip moths, white pine shoot moths, pine needle scale and gall aphids are among the pests listed in the New York quarantine, Dr. Guyton said.

Growers desiring inspection must prove that the trees are consigned to New York State outlets. Nursery stock certified by the Pennsylvania Department of Agriculture will continue to move freely between states, he also explained.

Intensive Tillage Means

Higher County Corn Yields Possible

Failure of Lancaster County farmers to fully utilize their soil's production potential in corn operations was pinpointed by Penn State Extension Agronomist James Eakin this week, as the major reason county farmers ar not obtaining "Midwest" corn yields.

Eakin was present for a series of Hybrid Corn Field Trips and Demonstrations slated for test plots within the county. He discussed corn practices and results Tuesday with farmers attending the first scheduled demonstration on the Clarence Harnish farm, Lancaster RD7, before rain Wednesday forced cancellation of the second program and threatened to halt Thursday's schedule.

Soil and climate of this area are adapted to production of 100-plus bushels of corn per acre, Eakin declared. The controlling factor for top production is use of practices designed for the specific purpose of obtaining the desired yields.

Five techniques ere stressed by the agronomist as being vital to production of "Midwest" yields. They are.

Soil testing and fertilization according to test results

Planting a high-yield hybrid which has been a consistant standout in local tests

Planting for a MINIMUM stand of 16,000 plants per acre at harvest.

Weed control through chemical sprayings.

Extreme care avoid root damage by cultivating too close to plants or too deep

Plantings in county test plots of 16 - 20,000 plants per acre have produced visible signs of decreased yield in some hybrids, hile others have responded well, th Tuesday audience was advised.

Among varietys which provide promise of high yields and good "standability" in thick plantings were U. S. 13, Pioneer 301A, Penn. 820, and Funk G91, as well as some lesser known varieties.

Eakin emphasized the low organic matter content of county soils as a major weakness, developd through years of cropping. Use of annual field brome grass as a corn cover crop would aid in returning organic matter ot the area, he concluded.

Meeting to Host Lititz Farmers

A meeting has been scheduled for Nov 10 by the Lancaster County Soil Conservation District for farmers in the Lititz area to study the possibility of a Watershed program in that community.

Martin Muth, SCS work unit conservationist, Lancaster, announced the meeting has been planned to encourage farmers to adapt and use soil and water conservation measures.

Doors Close Today For 1959 Soil Bank

Today is the deadline for contract application for Lancaster County farmers to participate in the 1959 Conservation Reserve portion of the Soil Bank, reports Miss Dorotry Neel, ASC office manager.

Twenty-nine county farmers have applied for Conservation Reserve contracts. However, 117 have requested information concerning Soil Bank payments, Miss Neel reports.

Annual Feeders' Tour Set for Wed.

A New Look has been added to the Annual Lancaster County Cattle Feeders' Tour, scheduled for Oct. 29, according to Max Smith, county extension agent.

Smith reports the tour will switch from commercial bus transportation used in the past to a private car caravan with police escort.

The Wednesday tour will be completely within Lancaster Co. this year, with visits to eight farms. Interested feeders are urged to join with their neighbors and attend the all-day educational event.

Those wishing to join in the event, Smith said, may assemble at 8.30 a m. at the Mike Stoltzfus farm, Bareville RD 1, located on Route 222, one mile north of Oregon and south of the Sandy Beach bridge.

At the first stop, tour members will observe 100 steers on feed, two glass-lined silos and automatic feeders being installed.

Second stop on the tour will be at the New Holland Machine Company's farm, Lititz RD 3, (the former Jacob Evans farm just east of Lancaster Airport). The exhibit there will include steer calves, grass silage and a trench silo.

The Richard Buckwalter farm, Lititz RD 3, located at Kissel Hill will be the last morning stop. It includes an automatic feeder operation for 100 steers.

For lunch, tour members will disperse to diners and restaurants in the Florin-Elizabethtown area.

At 1 p.m. the tour will continue at the farm of Richard Nissley, Bainbridge, three miles northwest of Maytown. Nissley is feeding steer calves and heavy cattle on grass silage, with a new steer barn being featured.

J. Harold Frey, Marietta RD 1, (one mile east of Maytown) will be the next tour host. He will show his remodeled barn, 100 heavy cattle, 200 hogs and other points of his operation.

A proven operation with yearling cattle will be on display at the David Hess farm, Mt. Joy RD 1, one and one-half miles east of Maytown, on the third afternoon stop.

The tour will continue to three miles southwest of Central Manor, where members will see an automatic auger feeder for both silage and grain on the farm of Ralph D Brenneman, Washington Boro RD 1

Final stop on the program, Smith reports, is the John W. Sangrey farm, Conestoga RD 1, (one mile south of Rock Hill) where a liquid feeding program and self-feeding trench silo are utilized in handling 100 steers.

Local Broiler Market Hits Low 15.73 Avg. With .8 Cent Spread

LANCASTER, Oct 16 — The broiler market at Lancaster Poultry Exchange hit a new low last week with 36 lots of 170 880 broilers selling for an average price of 15 73 cents per pound The market's price range was a very limited 15 1 - 15 9, although there was a NO SALE on a 15 0 bid for one lot of white vantress

There were 58 lots of 199,330 birds listed with 60 lots totaling 200 680 head being offered However there were NO SALE decisions made by growers of 20 per cent of the offerings, and only 47 lots of 184 705 birds were sold

Last year's corresponding sale had 53 lots offered 45 sold with 139 360 head included The average for 40 lots of broilers was 18 86 ranging from 18 to 20 25, A margin of 3 15 cents above current sales

For ease of reading the listings the following abbreviations will be used WV—White Vantess IRW—Indian River Whites C—cockerels Cap—capettes and W MT—white mountains

Here is the complete Oct 16 sale by lot number, seller with grower in parenthesis, amount and breed, age in weeks and days and price

Just This Once

There's a farmer in your community who is going to lose his year's profit in the course of a split second soon.

You don't believe it. It might be wise to consider for a few moments, because — THAT FARMER COULD BE YOU.

This farmer will be working on his farm, harvesting. Trying to beat cold weather and get his crop in the barn. He will be in a mighty big hurry.

And as often happens, a corn stalk will jam in the picking rollers, or the husking rollers, or in a chain. He'll throw the tractor out of gear, leaving the picker in gear, though — just this once, you understand.

Then as his sudden scream of pain and shock and dismay shatters the autumn chill, you'll know — JUST ONCE IS ENOUGH.

Maybe he'll be lucky. Maybe he'll just lose a finger or two. Maybe he'll lose a hand. The wrist. Maybe, up to the elbow. Maybe — his arm. POSSIBLY — his life.

He'll probably have some form of health insurance. Just in case of a new baby, or polio with one of the older kids. Maybe it will pay the hospital bill. Possibly all of it.

But, PROBABLY, he'll have to dig into the savings for Sis's teeth, or Junior's first year of college, or the new car, or stove, or washer, or truck, or television set. That's to pay the first bills. But there will be more, and a hired hand, and special equipment he can operate with one hand, and rehabilitation expenses, and more hired hands, and more medical care, AND there goes the year's profits.

But, after all that's the fellow down the road, and — hang it all, these damp stalks Reckon I'd better — Naw, I won't bother, JUST THIS ONCE. . . .

Farm Facts Should Be Faced

We rejoice in any substantial evidence that farm people are about to share more equitably in our national prosperity. The repeated headlines announcing increased farm income since January 1 bring this to ind.

However, the farm problem is deeply committed to political determination, and the advance in farm income is being freely used to support specific theories of policy. It therefore becomes those who desire that their conclusions be solidly based on facts to examine the probable causes for this increase

Sales of crops carried over from the 1957 crop year, due to unfavorable harvesting weather, account for a sizeable portion of the increase in crop sales during early 1958. This fact was contained in early 1958 USDA marketing reports.

Higher prices of meat animals was an important factor in the total increase. Hog prices were near the top of the rather well established hog cycle This happened in conjunction with an upswing in cattle prices, which was largely a direct result of the 5-year severe drought over the range country.

When rains came in 1957 ranches began withholding cattle from market to restock their ranches, especially cows and heifers, to the extent of about 10 per cent of the normal market supply. This forced up the price of cattle, especially cows, to an abnormal level.

The price of feeder cattle rose sharply for much the same reason But in this case we have a group of farmers (cattle ranchers) profiting at the expense of a larger number of cattle feeders, who can look forward to narrow profit margins in 1959 — if any.

Weather conditions over a large portion of the citrus and winter vegetable area forced prices up and boosted the incomes of some farmers.

There is little that government did, or did not do, that could have been a vital factor in causing these advances in farm income.

It will be noticed that the farmer rises referred to took place largely in commodities that were not subject to mandatory price controls.

Only a small portion of the farm income increase took place in crops subject to price controls, and this was due to an increase in volume. Forcing price supports down to achieve a reduction in surpluses has generally failed to date. Yet, this was the avowed purpose for so doing.

A sound long range farm program must have a broader base than the vagaries of the weather to rely on, and must deal deal with some fundamental causes of the relatively low farm income compared with other economic groups. High on the list of such causes is the farmers' lack of bargaining power in the market.place for his major commodities.

If this is to be achieved, farmers themselves through their own organizations, buttressed by appropriate legislation, must do it.

There is little evidence that the present architects of farm administration recognize such a problem as even existing.

— The Farmer's Exchange

Halloween; time to unmask

The U S District Court has ordered National Tax Equality Association to reveal its list of members The order was requested by National Milk Producers Federation

The NTEA has 2500 members and as an organization is dedicated to fighting cooperatives of all kinds It is known that among its members are banks private utility firms insurance companies, and many others Naturally it opposes credit unions, farm credit associations, national farm loan associations grand and feed, seed and fertilizer co ops etc

But NTEA doesn't want to disclose names of its members Farmers and others quit patronizing those members when their names are mad public it was argued Also, many members will not renew their membership after they hav lost business NTEA claims it had 10 500 members and contributors in 1951 but now has 6 500 Remaining members and contributors have informed NTEA that their support will continue only so long as their names are not divulged

The Milk Producers told the court that NTEA serves as a medium of concealment" for non co op business to attack co ops illegally 'without disclosing their identity"

The Journal has long argued that NTEA is bent on eliminating competition and about all the competition that some companies have is supplied by co-ops The people need to know who NTEA really is And the court has agreed Idaho Farm Journal

THE BIBLE SPEAKS

International Uniform Sunday School Lessons

BY DR. KENNETH J. FOREMAN

Bible Material: Matthew 4:1-11.
Devotional Reading: Hebrews 2:17-18; 4.14-16.

Instead of a Cross?

Lesson for October 26, 1958

THE TEMPTATIONS of Jesus have been the subject of tens of thousands of words explaining them. Some people seem unwilling to believe that Jesus could ever have been really tempted. Of course if he could not really be tempted, he could not really be human. Being tempted is not the sin, it is yielding to it that is the defeat.

Choice Always Means Temptation

Many Christian theologians believe that the three special temptations described for us by Matthew were, so to speak, official not personal. That is, they had to do with the question of what Jesus was to accomplish with his life in this world. If he was really and truly human, then like human beings everywhere he would have to think out his problems.

Dr. Foreman

He was born to be king: but what kind of king? He was born to set up a kingdom: but what matter of realm would it be, and how was he to go about getting it started? That he had a high destiny, he knew. But still the question bored into his mind: What next? What do I do now?

Choice always brings temptation. For in every choice there lies the possibility, and the attractiveness, of choosing something less than the best. And to choose less than the best, even when that is a good thing in itself, is wrong.

The Good Instead of the Best

Looking at the temptations of Jesus from this angle, we can see that the first two of them were temptations to use his great powers in ways that were good . . . only not the best. Remember Jesus had at this time never performed a miracle. It is quite possible that he was conscious of possessing supernormal powers, and if so, he must have given thought to the question, What should he do with his power? This is a special form of the problem every Christian must decide: How shall I use the gifts and the powers which God has given me?

The first temptation suggested that he use these powers to feed the hungry. We forget Jesus' overflowing generosity if we fancy that if he had turned stones into bread, it would have been used as food for himself alone. Stones are useless, bread is useful. The country was burdened with hungry people. What was wrong with feeding them with miracle-bread? Nothing was wrong with it. The point was, it was less than the best use he could make of his God-given powers.

The second temptation was like the first. He was tempted to perform a miracle in the most public and spectacular fashion He was invited to defy the law of gravity to prove that God would take care of his own, no matter what. Who will deny that Jesus could have won friends and influenced people by such astounding miracles? But he would not do it. It wasn't that the thing was sinful in itself. It was the wrong way to the throne.

Bad Means to Good Ends

In the third temptation, Jesus was tempted in a different way, namely to attain his great purpose of setting up a universal kingdom, by the use of bad ends. Here he is tempted to something evil in itself: but the end in view, namely control of the kingdoms of the world, would surely justify whatever method Jesus might take to achieve that end. Or so the tempter might argue. But Jesus knew better. He knew that if an act is really evil, all the good intentions in the world, all the noble purposes of a Messiah himself, will not glorify the evil thing.

Jesus was born to be king, king of mankind. But he would not be the King of the Full Stomach, he would not be the King of the Astonished Mind. Still less would he be the King of what could be seen from the devil's most high-flying airplane. He would be king of men's hearts. He would be the Savior-king, Lord of transformed hearts. And this he could be only by going to the cross. For that, after all, is what all these temptations were: signposts pointing him down this way and that, away from the cross If he had taken these byways, he could not have become what he is, Savior of the world.

Now Is The Time . . .

By MAX SMITH

County Agricultural Agent

Max Smith

TO RECOGNIZE THE VALUE OF CORN COBS— The common corncob is coming into its own. Each year mor uses are found for this material once considered of little value on the farm In addition to many uses in industry the corn cob is valuable on the farm as a steer feed, poultry and livestock bedding, and as a mulch for shrubbery and flowers.

TO STORE CORN PROPERLY — Many temporary corn cribs and storage devices are being put into use this fall to handle the big corn crop. Caution should be used to see that the new corn gets plenty of air circulation to prevent heating and molding, this is especially true with some corn pickers when many husks remain on the ear Corn piled on the barn floor, or any other tight floor, or against a tight wall is likely to mold unless it is turned frequently or air forced through it Corn placed over a wire duct on the barn floor and then air forced through the duct with an electric fan is successfully being used

TO BUY BONDS — All farmers are urged to invest in United State Government Bonds, on the Series E and Series H Bonds the interest rate has been raised to three and a quarter per cent If you have money to invst, we suggest that you consult your bankr on additional details

TO GET RID OF ASPARAGUS TOPS — Now is the time to give the 1959 asparagus crop a boost by getting rid of the old tops, they have served their purpose when they turn brown in color this fall and should be removed This will not only improve the appearance of the beds but by removing and burning the old tops, you may reduce the trouble from insects and disease

TO CONTINUE CLEAN CULTIVATION — In the strawberry patch if chickweed has been a problem and if you notice any new plants this fall, we suggest that you continue clan cultivation as long as possible, this will reduce the amount of chickweed that will bother later in the fall and winter.

Soybean Silage Economical Feed For Breed Sows, Research Shows

Soybean silage, when properly supplemented, is a satisfactory and eonomical feed for brood sows, according to experiments at the Agricultural Experiment Station, the Pennsylvania State University. At other research stations corn silage and certain grass silages—fed with a well formulated protein supplement and corn in the case of grass silage — produced good results when feed to sows during the winter gestation period

The results may have much practical use, since many hog producers in Pennsylvania are also dairy farmers who feed silage to their cattle, reports J L. Gobble of the animal husbandry department at Penn State Working with Gobble on the studies are R. C Miller and G W. Sherritt

"It would be an advantage if silage could be fed economically to brood sows, especially when no pasture is available," Gobble points out.

. The silage-fed sows farrowed 11 living pigs per litter and weaned 9 9 pigs per litter with a litter weaning weight of 329 pounds The control sows farrowed 10 3 pigs per litter and weaned 7 7 pigs per litter with a litter weaning weight of 304 pounds

Gains of the silage-fed sows averaged only 21 pounds during gestation while the control sows gained 89 pounds At birth the average feed cost per pig from the control sows was $1 96 Average feed cost for pigs produced by the silage-fed sows was $1 29

Feeding somewhat more corn to the silage-fed sows probably would have prevented the difference in sow weights, researchers believe Feeding the silage-fed sows an additional pound of corn per sow per day probably would have made the pigs cost $1.62 each at birth

Gypsy Moth Bans Lifted in Penna.

HARRISBURG — Gypsy moth quarantine was lifted in Luzerne Carbon, Monroe and Lackawanna Counties effective Sept 20

The quarantine had been in effect in portions of these counties since November 20, 1955 It was intended to prevent spread of the pest to uninfested areas by requiring inspection of materials that coud carry egg masses, such as nursery stock, logs and building stones

Revocation of the quarantine is made possible by the spraying campaign carried on in the spring of 1958 A trapping program this summer failed to locate any living forms of the gpysy moth in Pennsylvania, Henning said

Dr Thomas L Guyton, director of the State Bureau of Plant Industry, said, "We are happy tohave the quarantine lifted It has been a nuisance to the people living in the area—a necessary nuisance to be sure"

Dr. Guyton points out that the failure to find a single living gypsy moth in the Commonwealth this summer, using 14,000 traps manned by 50 men trained to identify the moth, caterpillars of the gypsy moth and egg masses, climaxes a campaign that started in 1932.

"The gypsy moth was found to be quite widespread between Wilkes-Barre and Scanton during 1932," he said. "At that time we had only lead arsenate as a control From 1932 to 1944 we were fighting a losing battle We could kill only about 90 per cent of the caterpillars

"Then in 1944 the federal government made a few pounds of DDT available for test use We sprayed a heavily infested 20-acre woodlot and got unbelievable control

"It was in 1946 that the aerial spray programs really got started We found that we could cover more ground in one morning with a plane than we could in a season with the conventional ground sprayers that we had been using" Dr Guyton said

More than 450 000 acres, were sprayed with DDT this spring. The spray program started about May 1 and finished about June 6. The trapping program then followed No spray program is anticipated for next year.

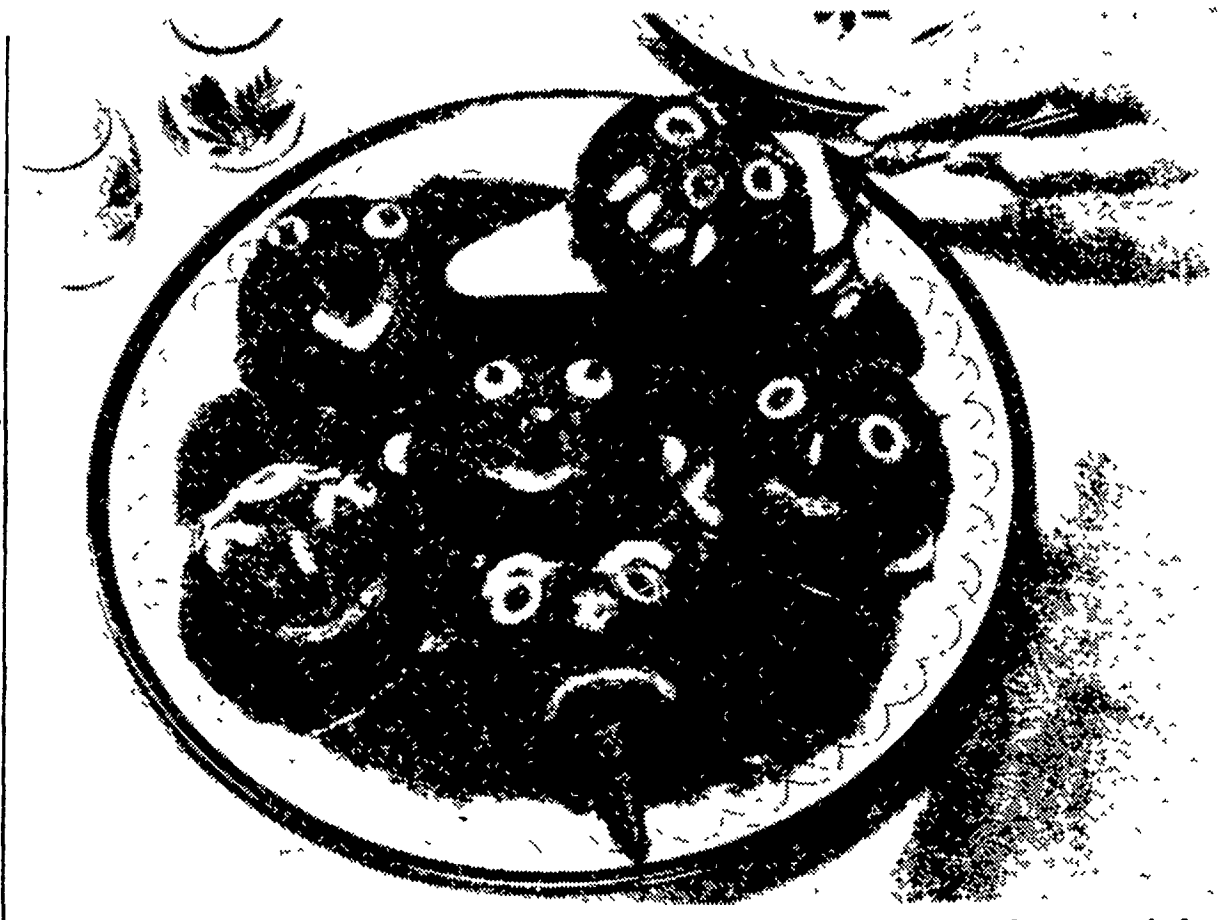
Try Rice-for A Better Diet

What a wonderful food rice is! Every grain is packed with high quality vegetable protein. Every grain is ready and waiting to be quickly cooked in one of a thousand different ways. There is no tedious peeling, scraping, washing or cutting up to do. Yes, rice is our No. 1 convenience food.

Today we are going to feature rise in our recipes, main dishes, desserts, salads, etc. Try them soon and you'll hear your family asking for seconds.

Here's a real conversation piece for special dinners — a pleasant way to get real nourishment into your feeding-problem child. For fun, you can make sad or glad faces; have girl-Riceburgers or boy-Riceburgers. Use olives for the eyes and pimiento pieces for the nose and mouth. Pieces of carrots, radishes, pickles, onions and even peanuts may also be used to make the faces. You might also try green beans, shreds of carrots or celery, thin onion rings or parsley for "hair". Serve 'em with a "cap" of hot tomato sauce.

The juicy, perfectly seasoned beef patties have a filling of sharp cheese and rice Mister Riceburger is baked just a short time so this is a real fast meal. These burgers are really fun, so good and especially nutritious because of the high protein contributed by the meat, cheese and the vegetable protein of the rice Minus a facial decoration, this succulent beef patty will delight the sophisticated



MISTER RICEBURGER

⅔ cup uncooked white rice
1⅔ cups water
1½ teaspoons salt
1 slice white bread
⅓ cup milk
1¼ pounds ground beef (chick or round)
¼ teaspoon black pepper
1 teaspoon thick steak sauce
⅓ cup grated sharp cheese
Pimiento-stuffed green olive slices
1 8-ounce can tomato sauce

Put the rice, one and one-third cups of the water and one-half teaspoon of the salt in a 2-quart saucepan. Bring to a vigorous boil. Turn the heat down. Cover with a lid Simmer over this low heat 14 minutes. Remove the saucepan from the heat but leave the lid on 10 minutes.

While the rice cooks, tear the bread into small pieces. Pour on the milk. Stir in the beef, one teaspoon of the salt, one-eighth teaspoon of the pepper and the steak sauce. Mix well. Roll into 12 equal-sized balls.

Cover a large shallow pan or baking sheet with aluminum foil Pan should be large enough for 6 meat patties. Place 6 of the meat balls in the pan. Pat out as

flat and thin as possible.

After the rice cooks, stir in the remaining one-third cup water and one-eighth teaspoon black pepper. eat, stirring, until the water is absorbed. Stir in the sharp cheese. Place an equal amount of the rice mixture on each of the flattened meat patties — mounding slightly away from edges.

Pat out the remaining 6 meat balls to make thin covers for the riceburgers. Place over the rice mixture on the 6 in the pan. Pinch meat together around the edges to seal in the rice mixture. Press the olive slices into the meat patties to make eyes. Use pieces of pimiento for mouth and a nose Other foods such as peanuts, radishes, onion slices, celery, pieces of pickle and carrot rings may be used to make many types of interesting faces. If any of the foods appear to dry out during baking, grease or cover lightly with aluminum foil.

About 25 minutes before serving, place the stuffed Riceburgers in a 350 degree oven. Bake 20 to 25 minutes or until the meat is done. Serve immediately with tomato sauce which has been heated until piping hot. This recipes makes 6 servings.

Try this Kondike stew. You'll depend on this idea on the days you get home late and the family is clamoring for a hot meal

This recipe depends on the can opener. Also, it gives you a chance to practice your seasoning tricks If you wish, use your own favorite stew seasonings and some pinches of herbs

KLONDIKE STEW

1 1-pound can diced carrots
1 1-pound can cut green beans
½ cup uncooked white rice
1 tablespoon instant minced onion
1 8-ounce can tomato sauce
1 1-pound can meat balls and gravy
1 teaspoon salt
⅛ teaspoon black pepper
About ½ cup water

Drain liquid from carrots and green beans into a measuring cup Add water if necessary to make one and one-half cups. Put the rice, onion and the one-and one-half cups liquid into a 2½ or 3-quart saucepan. Bring to a vigorous boil. Turn the heat down low. Cover with a lid. Simmer over this low heat 14 minutes Stir in the tomato sauce, meat balls and gravy, salt, pepper and water Cover and simmer 15 minutes. Add more water if mixture cooks dry or a thinner mixture is desired.

Stew may be served in soup bowls or on dinner plates. This recipe makes 7 generous servings

Menu suggestion Klondike stew, molded fruit salad, brown-and-serve rolls, cheese cake.

Here's a delicious rice and beef casserole which features a wreath of white rice laced with sour cream and sprinkled with paprika. The broiler puts a golden glow on the paprika just before it's time to serve the oven dish. Beef and celery simmer in the oven until the meat is tender Just before serving, the rice border is added

COLONIAL RICE CASSEROLE

1½ pounds lean stew beef
Flour
3 tablespoons cooking fat
1½ cups coarsely chopped onions
1 cup sliced celery
1 tablespoon thick steak sauce
3 teaspoons salt
¼ teaspoon black pepper
3½ cups hot water
1 cup uncooked white rice

Society 8 Lists Plans for Month

Mrs Catherine Erb, Mt Joy RD 1, demonstrated dried flower arrangements at a meeting of Farm Women No 8 held Saturday at the home of Mrs Clyde Sumpman, Mt. Joy RD 2.

Misses Linda Sumpman and Lorraine Felty entertained with several vocal selections.

On Oct. 29 two of the members will attend the Leadership Training Meeting on "Holiday Pastimes" sponsored by the Extension Service. The meeting will be at the PP&L building in Lancaster.

A number of the members went to Rossmere, Tuesday to help fold Tuberculosis Christmas Seals. They will assist in distributing literature to the schools and businesses in the Mt. Joy area On Oct 28 they will sew at the General Hospital On Nov. 1, they will attend the county Convention at Hempfield High School.

Next Society 8 meeting will be Nov 1 at 6 30 p.m. It will be Family Night in the form of a covered dish supper at West Green Tree Church of the Brethern. Dr. David Schlosser, Mt. Joy will show slides of Alaska.

Passenger cars in the U. S. travel an average of 9,359 miles per year. Passenger car advertisers invested over 13 per cent more in newspaper advertising in 1957 than in the previous year.

INSTALLATION OF OFFICERS for the 20th year of Society of Farm Women No. 15's activities occurred Oct. 16 at Union Presbyterian Church. Mrs. Richard Edwards, left, installing officer of the first elected officers of the southern Lancaster County group returned for this year's ceremony, taking the same role. Officers being installed are, from right, Mrs. Harvey Wenger, Mrs Forest Reinhart and Mrs. Mary Howett. LF Photo

Silage Users On the Rise

Silage production keeps growing, and harvesting methods keep improving Horsedrawn cutting sleds were used when silage was first reported on a small scale, in this country in 1875. But field choppers have harvested over 80 per cent of the silage in recent years.

A USDA survey indicates that about one-eighth of our farms used silage in 1955. The study, conducted by ARS and Agricultural Marketing Service on 29,000 farms, shows an increase in silage making and in number of farms using silage. This trend is pronounced everywhere except in the Lake and Northeastern States

Production in 1955 ran 73 million tons — one third more than in 1951 The 600,000 farms making silage in 1955 represent a 20 per cent increase in 5 years

Society 15 Marks Twentieth Anniversary

More than 40 charter members former officers and members of Farm Women's Society No. 15 participated in celebration of the group's 20th Anniversary, Oct. 16 in Union Presbyterian Church..

Mrs Richard Edward, Quarryville RD 2, former state president of the Penn Society of Farm Women, who helped organize the group, served as installing officer for the club's newly-elected 1959 officers

Mrs Wylie Howett, Kirkwood, who was the first secretary of Society 15, was elected president Mrs Forest Reinhart, Kirkwood RD 1, is vice-president, and Mrs Henry Wengel, Quarryville RD 2, was elected corresponding secretary

The Society's first meeting was reenacted with Mrs Howett reading the minutes and Mrs Charles Schriber, the first president, presiding Mrs. John Haverstick, conducted devotions Charter members and past presidents were introduced.

Retiring president Mrs. Bernard Jackson, presented a gift to Mrs Schriber. Mrs. Erma Witmer delivered a report on the county executive board meeting.

Greiders Do It Again!

High Leghorn Pen In 1958 Storrs Egg Laying Test

This pen of Greider leghorn hens finished the year with 3508 eggs and 3779 points.

This fact may not seem too much in itself, but does, we believe offer continuing proof that Greider leghorns are plain downright hard to beat.

Our competitors know this only too well, regardless of what they might be saying.

FARM INCOME UP 11 P.C.

During the first 7 months of 1958, farmers received 16 6 billion dollars from marketings, 11 per cent more than last year, according to the Demand and Price Situation report released August 26 by the Agricultural Marketing Service. Prices are reported to have averaged 7 per cent higher and the volume of marketings 4 per cent larger. Cash receipts from livestock and livestock products of 10 6 billion dollars, the report says, were 11 per cent more during the same period of 1957, mainly because of larger receipts from cattle and calves, hogs, eggs, and broilers. Crop receipts totaled 6 0 billion, up 12 per cent, reflecting increases in receipts from wheat, corn, citrus fruits and potatoes.

For the Farm Wife and Family

½ pint dairy sour cream
Paprika

Roll the beef in flour. Melt the fat in a skillet Add the beef and brown on all sides Put the browned beef, onions, celery, steak sauce two teaspoons of the salt and pepper in a greased 2-quart glass oven dish Just before baking, pour on one and one-half cups of the hot water Cover and bake in a pre-heated 350 degree oven one and one-half hours

About 30 minutes before the beef is done, put the rice, one teaspoon of the salt and two cups of the water in a 2-quart saucepan Bring to a vigorous boil Turn the heat down Cover with a lid Simmer over this low heat 14 minutes Remove the saucepan from the heat but leave the lid on 10 minutes After the meat is done, spoon the rice around the edge of the oven dish Spread the rice with the sour cream Sprinkle with the paprika Place under the broiler until the paprika begins to brown Watch closely Serve immediately This recipe makes 6 servings

VARIATION Substitute a beef kidney for one pound of the stew beef Split the beef kidney in half Remove fat Slice Wash well in cold Roll in flour and brown along with the remaining one-half pound of stew beef

Tender, succulent pork chops and vegetables cook together for a specialty almost a meal in itself Just add a crisp bread, a salad and dessert for a complete meal The savory pork chops and vegetables may be prepared ahead of time and each serving wrapped in its own foil packet. Then at meal time, the packets are placed in the oven This means you have no pots and pans to wash after the meal is over These were done hours before Cooking in foil means that none of the meaty flavor is lost

PORK CHOP PACKETS

1 cup uncooked white rice
1 teaspoon salt
2 cups water
¼ cup all purpose flour
6 pork chops
½ cup chopped onion
½ cup chopped green pepper
1 ¼ to 2 cups canned or frozen green peas
1 cup water
1 10½ ounce can condensed cream of mushroom soup
2 teaspoons salt
¼ teaspoon black pepper

Put the rice, salt and two cups of water in a 2-quart saucepan. Bring to a vigorous boil. Turn the heat as low as possible Cover with a lid and simmer over this low heat 14 minutes Remove the saucepan from the heat but leave the lid on 10 minutes

While the rice cooks, cut some of the fat from the pork chops. Fry out in a large skillet Dip the pork chops in the flour. Brown well on both sides in the fat. If necessary, add fat to keep from sticking Tear off six pieces of light-weight aluminum foil about 14 inches long Divide the rice between the pieces of foil, placing the rice in the center of each foil. Top with the pork chops.

Mix together the onion, green pepper, peas, water, mushroom soup, salt and pepper. Top the pork chops with this mixture using a liberal one half cup for each.

Bring one side of the foil over to meet the other side Hold the edges together and seal by at least two length-wise folds Seal the ends together with at least two folds Packets may be kept in the refrigerator until meal time and then baked Place the packets in a preheated 450 degree oven for 45 minutes.

Serve the pork chops and vegetables in the foil by opening the foil packets and turning the edges back.. This recipe makes 6 servings.

Menu suggestion· Pork chop packets, fruit salad, bread sticks, butterscotch pie.

Apricots and eggs give a golden glow to this spicy, fruited rice pudding The pudding is packed with food value: important vegetable protein from the rice; iron from the eggs and dried fruits, protein, calcium, etc from the milk!

Farmers, why did our Representative vote to cut funds earmarked for market promotion of Agriculture Products, when this program alone helped to sell 12% more milk?

Kenneth McCauley

Six Holsteins Finish Penn State Milk Tests

BRATTLEBORO, VT — The Holstein Friesian association has announced completion of outstanding official production records by six registered Holsteins owned by Lancaster county farmers

Penn State university worked in cooperation with the organization, supervising the weighing and testing of production as part of the Herd Improvement Registry

Harold K Book, Ronks, is owner of Roaring Maples Gay Faith, a 7-year old, producing a total of 14,042 lbs of milk and 603 lbs of butterfat, milking twice daily for 311 days His Roaring Maples Empress Della, a 4-year-old, milked twice daily for 310 days recorded 16,335 lbs of milk and 631 lbs of butterfat

Issac M Brubaker, Lititz, also had two cows compiling high records A 10-year-old, Bruk Vil Lucy Polly Admiral, produced 14 955 lbs of milk and 570 lbs of BF, milking twice daily for 365 days for 317 days, recorded 15 163 lbs of milk and 569 lbs of BF

Robert H Kauffman, Manheim, is owner of Parkchester Sovereign Star Pat, a five-year-old, producing 16,656 lbs of milk and 584 lbs of BF, milking twice daily for 318 days

Earl L Umble Atglen, is owner of Drumlocky Ajax Artis, a nine-year old, producing 14,548 lbs of milk and 570 lbs of BF on twice daily milking for 365 days

---

Thomas A Edison, the great inventor was so persistent in his work, according to the archives of McGraw Edison Company, that he spent ten years and more than 5000 experiments before perfecting the Alkaline storage battery

It's The Law

"It's the Law" with simple answers is offered to LANCASTER FARMING in cooperation with the Pennsylvania Bar Association. General interest questions are welcome.

Q How old must a young man or woman be before they can purchase a car without the signature of the parent?

A W.

A There is no law in Pennsylvania which says that a person must be a certain age before they can purchase an automobile with or without the signature of their parent It is the law in Pennsylvania, however, that a contract made by a minor, being a person under 21 years, can be voided, or cancelled, by the minor at any time before he reaches 21 years of age, or within a reasonable time thereafter For this reason, any one who sells an automobile to a person under 21 years of age takes the risk of having such person default on the sale, and the seller would have no remedy other than to demand the automobile back

943 Acres Signed With Soil District

Requests for approval as cooperating units in the Lancaster County Soil and Water Conservation District by 13 county farm operators were accepted Monday by the district board.

The 13 farms include 943 acres of county land to be operated under conservation practices within the district, raising the district's total number of cooperating units to 1,686.

Signing agreements under the program were: Elis S. Martin, East Earl, RD 1, 56 acres; Harvey B. Zimmerman, East Earl RD 1, 47 acres; Benjamin N. Zimmerman, East Earl RD 1, 65 acres; Issac B. Zimmerman, New Holland RD 1, 64 acres; Fred W. Johnson, Willow Street RD 1, 67 acres, and Henry S. Eby, New Holland RD 1, 66 acres.

Also, Aaron Z Zimmerman, New Holland RD 1, 67 acres; Elizabeth M Sauder, Columbia RD 2, 73 acres, Clarence Good, Narvon RD 2, 84 acres, Willis M Martin, East Earl RD 1, 57 acres; Clair Shimp, Quarryvile RD 3, 160 acres, New Holland Machine Co, New Holland, 119 acres, and Ira N Williams, Manheim RD 1, 18 acres

U.S. Poultry Products Attract Interest At World's Poultry Congress

A U. S. Department of Agriculture exhibit stressing the high quality, nutritive value and convenience of U. S. poultry products available for export attracted thousands of visitors at the 11th World's Poultry Congress in Mexico City recently.

Visitors to the Congress from 47 countries displayed in frozen, packaged samples of every type of commercial ready-to-cook poultry packed in the United States USDA poultry research and marketing specialists answered many inquiries regarding availability and quality of the products.

The visitors had an opportunity to sample poultry dishes, made from recipes of numerous countries, in a model kitchen operated by a USDA home economist.

The exhibit provided a dramatic demonstration of the prominent place the poultry industry holds in U. S. agriculture, and the progress it has made in processing, packaging, and consumer education designed to increase poultry consumption

Panels in the exhibit showed how efficient poultry breeds are developed cooperatively by U S. Federal and State research agencies and private industry, and how poultry rations have improved through the years Other panels explained the steps in mechanized poultry processing; the nutritional value of poultry in the daily diet, and how U. S. cooperatives market poultry.

The exhibit included a theater where motion pictures depicting the U. S. poultry industry were shown, with English and Spanish narration More than 15,000 USDA publications were distributed to Congress delegates

Annual Feeder Sale Set For November 1

The Fourth Annual Lancaster Feeder Calf sale is scheduled for Lancaster Union stock yards, at 1 p.m., Nov. 1.

The sale is one of a series held in cooperation with the Penn. Livestock and Allied Industries Association, and will offer purebred feeder calves from many of the best beef herds in the east. The offerings will be sorted into uniform lots before sale.

Lancaster Livestock Exchange officials, representing the sponsoring organization, report fancy club feeders will be available.

Until you take the wheel of a D Series Tractor... until you step up to the low platform, settle back in the Easy-Ride Seat, and drive a D-14 or D-17. . you'll never know how far tractor farming has come.

Power Director — a great new advance — lets you quick-shift on-the-go between ranges You have eight different speeds ahead... plus live PTO.

Move the "big stick" forward and you increase ground speed 50 percent... pull it back and you increase pull power 42 percent In either position, you get fuel-saving performance — no wasteful internal slippage.

Power Director is exclusive with Allis-Chalmers D Series Tractors... and it's backed by TRACTION BOOSTER system that puts the extra pull to work.

You owe yourself a ride on a D-14 or D-17. Why not take it today... we have a demonstrator ready!

TRACTION BOOSTER is an Allis Chalmers trademark.
